Dear Sir/Madam,

I'm pleased to be applying for the position of Front-end developer at Staff India. As a computer science and engineering student from Metropolitan University with 1+ years in the web development field, I possess the skills and expertise you are seeking for your front-end developer position advertised on thousand careers.

During the second year in university, for a course project, I made a full backend and frontend food delivery website called "Food Lounge" developed using Laravel, Mysql, Html, CSS, and Bootstrap web technology and my website's unique design and payment system led me to achieve Grade A in that particular course. Since then my interest in web development kept on growing. I began to learn, create and design different type of website. Later, after gaining enough experience I started to work on Fiverr as a freelancer where I started to make front-end and backend websites for various clients. Consequently, I have now gained enough knowledge and skills on different web technology and framework through hard work and dedication.

Building user-friendly websites and application is truly a passion of mine and I am confident I would be an excellent addition to your organization. In addition to my knowledge base, I actively seek out new technologies and stay up-to-date on industry trends and advancements. I am aware that you will receive a large number of applications for this job, but I would very much appreciate the opportunity to demonstrate my capabilities to you in person.

Thank you for your time and consideration. I look forward to speaking with you about this opportunity.

Sincerely,

Sadikur Rahman
