Projects:

SMART SHOP: This is actually an e-commerce project using Laravel framework. From product filtering to having a dynamic shopping cart, I carefully design and develop my project with user experiences to be as professional as possible. This whole system is controlled by an admin panel and made up using **PHP(Laravel)**.

MIH ESHOP: This is actually another e-commerce project using Laravel framework. This is actually built on a different style from the previous project of Laravel and I try to make this project to give more professional look. This whole system is also controlled by an admin panel and made up using **PHP(Laravel)**.

SMS: Student Management System is designed to help students for management of student's various criterias. Extensive information for students is available in my system like: viewing student data, managing admission, viewing faculty info, viewing department wise courses info and various services of students etc. This whole system is controlled by an admin panel and made up using **PHP(Codeigniter)**.

TNPC: Training and placement center management is a facility where people are given specific work related training. And after the training they are assigned to various company located within and outside the country. It is based on **PHP(Codeigniter)**.

This project is aimed to develop a web application where the project describes about various types of people who can get job according to their qualification judged by the training center in which they trained.

Extra-Curricular Activities:
